

BRIGHTMART RETAIL CO.

Sales Performance & Business Insights Report

FY2024 Sales & Customer Performance Analysis

Prepared by: Business & Data Analyst | Data Source: FY2024 Sales Dataset (200 transactions)

Agenda

01

Business Problem

Why sales data wasn't driving decisions

02

Analysis Summary

FY2024 performance at a glance

03

Key Findings

Category, region, segment & seasonal trends

04

Recommendations

Where to focus next

05

Power BI Report Design

How this will live on as a self-service dashboard

Business Problem

Sales are recorded — but never summarized

Sales and profit at BrightMart Retail Co. are logged transaction by transaction, but leadership has no consolidated view of performance. Without it, budget and marketing decisions are made without clear evidence.

- Which regions are actually profitable?
- Which product categories drag down margin?
- Which customer segments deserve retention focus?

200

FY2024 transactions analyzed
with no prior reporting layer

*“We can’t tell which segments
are actually profitable.”*

— Leadership, BrightMart Retail Co.

Analysis Summary

Performance was broken down by product category, region, customer segment, and month to see where sales convert into profit — and where they don't.

FY2024 SALES BY MONTH (\$)

Category Performance

Furniture & Electronics drive revenue — not always efficiently

Furniture (\$236,542, 22% margin) and Electronics (\$221,781, 18% margin) generate the largest sales and highest average order values.

Clothing sells far less (\$32,910) but converts sales to profit much more efficiently — a 37% margin, the highest of any category.

Takeaway: revenue leaders and margin leaders are not the same categories.

Category Profit Margins

Groceries: high volume, weak profitability

13%

lowest profit margin of any category

37 orders and \$14,730 in steady sales — but volume alone is not translating into meaningful profit.

Regional Performance

South lags all other regions

28–32%

behind North (\$149,083) and West (\$140,661)

South generated \$100,897 in FY2024 sales — pointing to a regional demand or execution gap rather than a company-wide issue.

Customer Segment Insights

 **81 orders**

Small Business places the most orders and drives the highest total sales (\$210,038) of any segment.

 **12.5 units/order**

Corporate orders carry the highest average quantity per order, making them a high-value segment for larger, less frequent purchases.

Seasonal Demand Patterns

Peaks: May & August

\$79,653 in May and \$70,477 in August — the two strongest months of FY2024.

Troughs: January & October

\$14,728 in January and \$15,568 in October are consistently the weakest months — a pattern that repeats closely enough to plan around.

Business Recommendations

Review Groceries pricing & supplier costs

Renegotiate supplier terms or adjust price points — margin, not volume, is the constraint.

Investigate the South region's underperformance

Compare staffing, local marketing, and store setup against North and West; pilot a targeted local push.

Build retention programs for Small Business & Corporate

Small Business drives volume and revenue; Corporate drives larger order sizes. Protect both with loyalty or volume incentives.

Plan inventory & staffing around seasonal peaks

Schedule restocking a month ahead of May and August demand spikes; manage costs during the slower January and October periods.

Power BI Report Design

A four-page self-service report, built on this same FY2024 dataset, so this analysis stays live and filterable.

PAGE 1

Executive Overview

KPI cards, monthly sales trend, sales by region & category

PAGE 2

Regional Performance

Sales & profit by region, margin %, region × category matrix

PAGE 3

Product Category Analysis

Sales & profit by category, margin ranking, AOV vs. margin

PAGE 4

Customer Segment Insights

Sales & profit by segment, average order value, segment × region

Filters on every page: Region · Product Category · Customer Segment · Month

Core DAX measures: Total Sales · Total Profit · Profit Margin % · Total Quantity Sold · Average Order Value
